TOPIC: Nuclear waste disposal. Drs. Smith and Newcomb will be providing a technical review of the geotechnical siting and engineering design associated with the National Waste Terminal Storage program in salt and, to a lesser degree, in other geologic media.

The NWTS program goal is to locate suitable sites for the safe disposal of high-level nuclear waste. Unlike most construction projects the 'design life' of the engineered geologic barriers is measured in terms of hundreds to several thousands of years. Dr. Smith and Dr. Newcomb have promised to provide an interesting overview of this unique project.

RESERVATIONS: Please sign up by preceeding Monday, noon.
